PaymentsPlus RESTAPI Implementation Guide

IN PROGRESS

Overview

This Implementation Guide supports Business Analysts in implementing PaymentsPlus RESTAPI, covering requirements, building, testing (UAT/PVT), lodgement and product-specific reference material.

Contents

- Initiation
- Requirements
- Building
  - Configuration

  - Costs
  - Qvalent Product Specialist

Initiation

- Kick off with the Project Manager to confirm the requirements listed in the Jira ticket. Gather as much project context as possible to prepare for the initial customer meetings.
- Initial customer meetings will include requirements gathering, completion of the Business Requirements Document (BRD), and a high-level overview of how the customer intends to use the REST API.

Requirements

Building

Prerequisites

- The Business Requirements Document (BRD) has been completed and formally approved by the customer.
- The associated Jira ticket has received approval from the CTG approval team.
- If lodging into production all relevant account details (Direct Entry, Merchant and PayID/PayTo) have been provided to you by the Project Manager.

Configuration

QuickStream Access

- QuickStream Administrator access
- The Community exists
- The required Supplier Business and Merchant Account exist

(if not see Community & Supplier Business Setup)

Testing

Lodgment

Additional Information

Gopher

Gopher is Qvalent application that centralises logic to connect to WDP (Westpac Digital Platform) to perform payments and poll for payment statuses. PaymentsPlus uses Gopher to submit OSKO and RTGS payments.
